Full-cohort MIMIC-IV v3.1 revision

Cover Letter

Dear Editors,

Please consider the revised manuscript, now rerun on the full eligible MIMIC-IV v3.1 cohort of 32,399 adult first ICU stays after prespecified inclusion and exclusion criteria. The previous 2,000-stay benchmark is no longer used for the main findings.

All reported performance values in the manuscript, supplement, and run report are read from the full-cohort output files under results/full_cohort. The package includes validation summaries, model completion status, figures, tables, and author review notes.

Sincerely,
Mohammad Sharafi
